Release Details

More details about this release, and previous releases can be found here; <https://tvone.com/tech-support/firmware/182-c2-2855-c2-2755-and-c2-2655-product-support-and-firmware-updates>

Installation instructions

Make sure you have CORIOcontrol software v1.2.11.0 or above installed.

If you cancel an update during installation, your unit is left in an unusable state. To recover, turn your device off and on, and run the firmware update procedure again.

All settings except the IP address are lost during a firmware update, including stills, logos and presets.

1. Open the CORIOcontrol software.
2. Use Ethernet or RS-232 to connect to your C2 unit.
3. Select **System > Update Firmware > Pick Update file to use.**
4. Navigate to and select the new firmware file you have saved on your PC.
5. Select **Open.**
6. Select **Start Update.**

When the update is complete, the unit restarts automatically and the CORIOcontrol software reconnects.

October 2017 C2-2x55 Firmware v580

Released by Bruce Meldrum

18th August 2021

Fixed

- Due to component obsolescence issues, we have needed to release a new version of firmware to deal with a component change. There is no change to the unit behaviour.

Notes

- This firmware is functionally identical to firmware v579. **There is no user benefit to upgrading units in the field.**
- There is a known compatibility issue with LM1750HD when using analog RGB output (PC input on display).
- A Left-Push transition might show a corrupt top line.
- Some menus on the unit display do not flash when they are in edit mode.
